
Stronghold Crusader English Language Pack

Download

DOWNLOAD: stronghold crusader english language pack, stronghold crusader 2 english . Jul 31, 2005 War Chest and Extreme Patch. Great for new players and veterans. A: You did indeed choose the correct language, but by default Stronghold Crusader is set to use non-country english if you installed the game (so it wouldn't know which language you wanted). Q: MySQL count with group by (This is my question) I'm a simple beginner at MySQL (worked with MyISAM until now), and I have a "challenge" in the most stupidly simple way. I have a table like this: `partner_id` int(11) NOT NULL, `unique_id` int(11) NOT NULL, `firstname` varchar(100) NOT NULL, `surname` varchar(100) NOT NULL, I want to count how many unique firstnames there are, and display only the unique firstnames. I have got: `SELECT DISTINCT partner_id, firstname FROM tbl_partners` But this gives me a list of all the partners and the firstnames, and I just need the unique firstnames with the count of total partners. I can imagine I need to do something with `Count(*)`, but I can't see how. Thank you. A: If you want the names ordered, then you want something like: `SELECT firstname, COUNT(*) as NumPartners FROM tbl_partners GROUP BY firstname ORDER BY NumPartners DESC` If you do want the names to be in different rows rather than different columns, you can use union all: `SELECT firstname, COUNT(*) as NumPartners FROM tbl_partners GROUP BY firstname UNION ALL SELECT firstname, NumPartners + 1 FROM (SELECT * FROM (SELECT firstname, COUNT(*) as NumPartners FROM tbl_partners GROUP BY firstname) q ORDER BY NumPartners DESC` Another method using `sql_mode` is: `SELECT q1.firstname, q2.NumPartners FROM (SELECT first`

. High quality pack with up to 3 languages and many customizations. A: You cannot change the in-game language because the game is not translated into your selected language. Please see the following support article for a workaround: Edit: For all the interested here is a solution to install a language pack for Stronghold Crusader HD: There is a german language pack available for free (thanks to Rolf). [unreadable] [unreadable] Individuals with bipolar disorder are at increased risk for psychosocial dysfunction. Despite the reported high rates of substance abuse (30-40%) and suicide (15-30%) in this population, little is known about the chronic consequences of these behaviors on the lives of this at-risk group. However, prolonged substance abuse and suicide attempt are all too common and represent a significant burden on caregivers and other members of a patient's social network, including family and friends. This burden is directly related to the time patients take off from work, and indirectly related to the costs of inpatient and outpatient services, such as emergency room visits, hospitalizations and lost wages from job and school re-entry. There is increasing evidence that social support is positively related to physical and mental health, and could potentially offset some of the social, cognitive, and emotional problems associated with bipolar disorder. However, much less is known about the chronic effects of substance abuse and suicide attempt on social relationships, such as marriage and family relationships, in bipolar disorder patients. [unreadable] [unreadable] The aims of this study are to: 1) describe the rate of alcohol and drug use in association with periods of mania and depressive episodes in bipolar disorder patients, 2) describe specific behavioral and cognitive characteristics associated with substance use and misuse, 3) describe the factors associated with relapses to substance use or misuse and their chronic consequences on substance abusing bipolar patients' relationships with their social network, and 4) assess the relationship between substance abuse and interpersonal relationships, including marital and family relationships. This study addresses questions about the chronic consequences of self-reported substance abuse and misuse on bipolar patients' relationships with their social network, as well as the psychological, psychiatric, and behavioral problems associated with substance abuse and misuse.
