Apple Mac OS X and Windows operating systems From AutoCAD 2007, the native Mac AutoCAD application has been integrated directly into OS X. The AutoCAD application is part of the main Mac OS X operating system, and requires OS X 10.6 or later. As with previous versions of AutoCAD, the application is released as a single.dmg disk image file, and runs on an Intel Mac computer, running Mac OS X. Versions prior to AutoCAD 2007 did not integrate with the OS X operating system. AutoCAD versions 9 through 16 used a Microsoft Windows COM (Component Object Model) based architecture. The Windows.exe file is compressed in a ZIP file as a separate program that is installed along with the main AutoCAD program. With AutoCAD 2007, the Windows.exe is included as a Windows application, and the application, with its user interface and menus, run within the native Mac OS X operating system. AutoCAD also has a version for the Windows operating system, called AutoCAD for Windows. This version is released in the same manner as AutoCAD for Mac, as a single.dmg disk image file.
