AutoCAD 2020 Update - Feb 2020 The AutoCAD 2020 update introduces the following new features and enhancements: • Automatic break line preparation. When creating a line segment with an angle dimension, the line is created as an A-break line instead of an angle dimension. This helps the line make a cleaner appearance in the drawing. To make this change, right-click (Windows) or Control-click (Mac) on the line and select AutoCAD. • Objects in Rotation Lock mode. Objects in Rotation Lock mode cannot be edited or changed with the Direct Selection tool. • Linetype and property changes in viewport update. When you change linetypes and properties in the viewport, changes are updated in your drawing viewport. • Size bar in plotter context menu. When you right-click a linetype in the plotter context menu, a size bar appears, with a drop-down menu of display sizes. • Projection Manager. The new Projection Manager window includes a tool bar with command buttons for standard and custom projections, as well as a list of the currently set projections. • New project panel and window tabs. A later iteration of the menu-driven interface in the CADDISP office suite is also available. There are two views: The familiar 3D Drafting and Drawing toolbars found in the older versions of AutoCAD A graphically-based ribbon interface used in the Windows versions of the software The ribbon interface, which was introduced with AutoCAD 2010, was a major departure from the traditional menu-based menus. In the 2015 release of AutoCAD, the ribbon interface was further enhanced and was named the Backstage interface to distinguish it from the Drafting and Drawing toolbars. Interactive features In 2011, AutoCAD introduced Interact mode, a new interactive mode for drawing and editing, in which editing tools are associated with specified objects, meaning that, when an object is selected, the object is automatically selected for editing, and is deleted when the object is no longer selected. The number of commands that could be entered using the traditional menus was limited, as were the number of active commands that could be displayed on the command line. Later releases of AutoCAD have added many additional features. AutoCAD LT supports both the traditional menu-based interface and the newer ribbon interface. AutoCAD supports object templates. These are 3D geometric objects that can be used to create a set of similar objects. The difference between object templates and a group is that templates are preserved between sessions, while groups are discarded at the end of a session.
