The Basics of Photoshop
Layers In Photoshop, layers are used to build an image from multiple images, a document, or from other layers in the same file. Photoshop layers allow you to perform any editing function on any element of your photo or image without disrupting the

structure of the layers.

Individual layers can be merged, moved, renamed, and joined. The layers in an image can be grouped to keep them together on the page for easier viewing. Two layers below the visible layers are the invisible, or hidden, layers that control which elements will be displayed on the page. As you move layer elements (e.g. the shape of a logo), the hidden layers adjust the appearance of an element without affecting the underlying layers. This allows you to see how a change will affect the overall image without disturbing the original. Photoshop Layers Layers are

basically an on-screen version of the layers in a layered format. When you create a file, Photoshop divides it into different layers. A layer is the transparent image that the objects and designs will be made of. An object in a photoshop file consists of one or more layers. Layers are placed above one another to build up the object. You can edit any element on any layer. When you edit an object on a layer, the other layers will adjust to accommodate the change. Photoshop automatically saves your work on a background layer and protects the rest of the image.

Making a Photoshop Document You can organize your files and keep them private by creating a document.

Each document is like a separate file that keeps your images, text, and other objects separate. When you create a document, you can assign a name to it. You can also add different files to a document by dragging them onto the document's canvas. You can rearrange or delete layers by highlighting the layer's name and pressing the Delete key. There is no limit to the number of layers you can add to a Photoshop document. If you go to File > New, you can create a

new document, or if you are currently in a document, you can click on the little folder icon at the top of the image you're working on and choose New Document. Adding a Background You can create a new background by choosing File > New > Document. In the first tab, choose your background color and set it to stretch or repeat the same color. If you do not assign a color, a default green

Fantasy Baseball Advice:
Pitchers You Should Have a
Greener Eye on September 15,
2016 It's pretty much a weekly
reality in baseball that not
every team's pitching corps is
going to be comprised of the
usual suspects: the Ricky
Nolasque's and Stephen
Strasburg's. It's a high-pressure
lifestyle even for those that can
thrive in the midst of it. Some
teams just have more hit-or-
miss pitchers than others,
however, and if you can't glean
as much from the first month
or so, then there's still a chance
that a small shift in

performance could result in significant improvement for your fantasy squad. Now, by no means do I mean to recommend picking up any pitcher who, for whatever reason, isn't performing up to par. But, I do believe there are some players on a bigger fantasy radar than others. There are obviously going to be more pitchers that are in line to regress, thus their value will naturally be lower. On the other hand, there are guys that look poised to have a large impact on their respective league for 2016. We'll take a look at a few of these pitchers. Keep in mind, they are not

ranked in any particular order. These are just a few that have caught my eye and have some not-so-obvious upside. Corey Kluber Corey Kluber was the subject of trade rumors even before the season started, as his 8.42 K/9 is easily the best in baseball. He's had that K/9 figured out since he was at Oklahoma State, and even though he's suffered a bit of regression in the second half, it's hard to imagine his season getting any worse than it already has been. When it was announced that Justin Masterson was headed back to the bullpen, Kluber's role was already well defined, but it's

going to be much tougher for him to snag saves with Terry Francona working to juggle the closer duties. His strikeout rate is the highest it's been since he was arguably the best pitcher in baseball and it wouldn't surprise me to see him reach double-digit wins if he continues to strike out the 10-12 batters he's averaged in his last four seasons. Jon Lester Lester is on the verge of his fourth straight season

A suspension of interest on student loans can provide a huge boost to a teenager's

future, especially if they're taking gap years. Suspended interest on student loan repayments is a policy that cuts the amount of interest that student borrowers pay each month, during the period of their study. While repayments are much more affordable with this interest cut, it's important to look at the total cost of the loan. There are three different types of student loans: UNS: This is a loan provided through the Universities and Colleges Union and is available to students taking part in, studying for, or working at post-16 education or higher education institutions in

England. Part-repayable: This is a loan provided by the government and available to students taking part in, studying for, or working at post-16 education or higher education institutions in England. Repayable: This is a loan provided by the government and available to students taking part in, studying for, or working at post-16 education or higher education institutions in England. Here's how suspended interest can help you pay off your student loan. Why is suspended interest on a student loan useful? Suspended interest means that there is no interest

on the loan for the time when it's in the process of being paid off. In other words, while the loan is in payment mode, the monthly repayments are calculated at a much lower interest rate, as shown in the example below. The monthly repayment is the only loan-related expense, and the amount you pay is based on how much you have left to pay back. This means that every month spent in a job to pay off the loan means more money going into your bank account. It's a policy that could really add up over time. "When the monthly repayment is added in (during the loan period) it's in

effect on a no interest basis - so it could potentially result in a massive saving," Paul Daffey, personal finance expert at MoneySavingExpert, told BBC News. "For many people, this could be very useful." If your student loan includes a "repayable" element, the Government has waived one year of interest for students, but this is only available on loans taken out before 1 August 2012. When should you apply for a loan? The best time to apply is when you've graduated from college or
